## PAMPHLETT-TENNYSON SEA SCOUTS

### 3. Wording above pocket

Mens	S	M	L	XL	2XL	3XL	4XL	5XL	TOTAL	COST
Ladies	8	10	12	14	16	18	20			
Kids	4	6	8	10	12	14	XS			
								TOTAL		

Kids sizes \$45 Adult sizes \$50

By completing this order form you commit to paying the items on the basis detailed in this form.

PTSS Leader / Executive member

Name: .....

Signature:..... Date: .....

Please make your payment to:

Scouts Association Australia PTSS General Account  
BSB 034-063  
A.C 314627

Note: Sail shirts & your name

Either hand your order form to a Leader or scan and email to [Darren.lelliott@gmail.com](mailto:Darren.lelliott@gmail.com)

Measurements for the chest/bust are of the person's chest, there is extra material so as not to be skin tight, for the sleeves it is shirt sleeve length (which is deliberately long to give extra sun protection on outstretched and raised arms).

#### MENS SIZE CHART

SPA Size	XS	S	M	L	XL	2XL	3XL	4XL	5XL
Fits Chest	86-90	91-95	96-100	101-105	106-110	111-115	116-120	121-125	126-130
Sleeve - Long	60	62	63	64	65	65.5	66	66.5	76

Sleeve - Long	37	42	45	50	52	56	60

#### SUN PROTECTION CLOTHING FABRIC

SunProtection Australia insists on using only the highest quality UPF50+ protective fabric. The fabric has a breathable mesh construction that makes for a fine and silky feel while offering exceptional softness and stretch.

It allows the breeze to penetrate through the fibres while blocking 98% of harmful UV rays. With a moisture management treatment that absorbs perspiration away from the body, the fabric is also sanitised and antibacterial.

It is quick drying, lightweight and durable. It is fade and chlorine resistant. Not only offering maximum sunprotection but maximum comfort – it is ideally suited to our harsh Australian climate.

We guarantee that not only will it give you peace of mind. ... it may be the most comfortable and durable fabric you will wear.

#### IS THIS FABRIC HOT TO WEAR?

ABSOLUTLY NOT!

This new tech lightweight UPF50+ microfibre fabric is woven in a way that is designed not only to give you in-built UPF50+ sun protection (ie no added chemicals!) but to keep you cool, dry and comfortable. This breathable mesh construction has a moisture wicking system that rapidly absorbs the perspiration from your body not only to keep you dryer but it creates your own personal 'air conditioning' system even in the most hot and humid conditions!! In addition the antimicrobial properties help sanitise and minimise odour. Being lightweight, incredibly durable and quick-drying it is the perfect fabric to keep you and your family protected from the harsh Australian sun.

#### HOW DO I KNOW THE FABRIC IS RATED UPF50+?

All our fabrics are independently tested by ARPANSA to AUS/NZ S 4399 (UV protection) and 4602 standards (Hi-Vis protection).

#### WHY NOT COTTON?

To get the same UV protection (UPF50+) from a cotton fabric the cotton density (weight) needs to be very heavy and/or chemicals added to the finished garment (this can cause skin irritation). This in turn compromises the strength of the natural fibre and airflow. In hot and humid conditions, the cotton garment becomes clammy, heavier, and wetter and ultimately more uncomfortable! Because cotton is a natural substance, the fibres tend to breakdown quicker with each wash therefore reducing the UV protection. Most lightweight cotton garments have an approx. UV rating of only 5 – this means that the UV rays can easily penetrate the garment and cause sunburn to the wearer and reduces a further 50% when wet!!
